## PROFESSIONAL SUMMARY

- **Full Stack Developer with 3+ years of professional experience** designing, building, and supporting scalable web applications across **enterprise platforms, e-commerce systems, and internal business tools**. Strong backend foundation with hands-on experience in **Java (Spring Boot), PHP (Laravel), and Node.js**, along with modern frontend development using **React and TypeScript**.
- Proven experience developing **scalable backend services and RESTful APIs** that support **high-traffic, multi-tenant applications**, real-time business workflows, payment processing, inventory management, and customer support integrations.
- Strong frontend engineering background building **modern, responsive web applications** using **React, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, and Tailwind**, with a focus on usability, performance optimization, and clean component-based architecture.
- Hands-on experience supporting **production systems on AWS**, working with **EC2, S3, and RDS**, and contributing to application scalability, monitoring, and deployment reliability for user-facing platforms.
- Practical experience with **DevOps and release workflows**, including building and maintaining **CI/CD pipelines using GitHub Actions and AWS CodePipeline**, supporting automated builds, deployments, and version-controlled releases.
- Solid background in **database design and optimization**, working with **MySQL and MongoDB** to support transactional systems, reporting workflows, and reliable data synchronization across services.
- Experience building and supporting **secure, enterprise-grade applications**, implementing authentication and authorization mechanisms, and integrating platforms such as **ServiceNow and Freshservice** for workflow and production support.
- Comfortable working in **Agile, cross-functional teams**, collaborating with engineers, **QA**, and product stakeholders using **Git, GitHub, Jira, ClickUp, Bitbucket, and Postman** to deliver features across the full software development life cycle.

## TECHNICAL SKILLS

|                               |                                                                                                                                         |
|-------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages:</b> | Java, Python, PHP, JavaScript, TypeScript, SQL, C++, HTML5, CSS3                                                                        |
| <b>Frontend:</b>              | React, Angular, Redux, Next.js, Vue.js, jQuery, Bootstrap, Tailwind CSS, D3.js, Ajax                                                    |
| <b>Backend &amp; APIs:</b>    | Spring Boot, Spring MVC, Laravel, Node.js, Express.js, RESTful Services, Hibernate, Flask, Django                                       |
| <b>Databases:</b>             | PostgreSQL, MySQL, MongoDB                                                                                                              |
| <b>Cloud Services:</b>        | AWS (EC2, S3, RDS, Lambda, CloudFormation), Azure, Docker, Kubernetes, Jenkins, CI/CD                                                   |
| <b>Tools &amp; Platforms:</b> | Git, Bitbucket, GitHub, VS Code, IntelliJ IDEA, DBaver, ServiceNow, Maven, JUnit, Jest, Postman, DBGate, Laragon, FreshService, Clickup |

## PROFESSIONAL EXPERIENCE

### TOGA TECHNOLOGY | FULL-STACK DEVELOPER

MAR 2025 – PRESENT

#### TOGa Platforms (*TOGa, TOGa Desk, TOGa View, TOGa IQ, TOGa Commerce, TOGa Supply, TOGa Hub*)

- Worked across multiple TOGa platforms as a **backend-focused Full-Stack Developer with strong frontend experience**, primarily handling **React (TypeScript, JavaScript)** on the frontend and **PHP, Node.js APIs, MySQL schema design**, along with production support for high-traffic, multi-tenant systems.
- Implemented backend integrations for **Talos (internal AI bot)** with **TOGa Desk and TOGa View**, enabling automated ticket creation, real-time updates, and programmatic resolution, **reducing manual contact-center effort by 30% and improving response times**.
- Contributed to scaling **React frontend and backend services** for **TOGa Commerce**, optimizing order placement kits, persona-based flows, and tracking workflows for a platform used by **85,000+ users, improving overall application responsiveness by 20%**.
- Developed and maintained end-to-end backend integrations between **Fresh service and TOGa Desk** using **REST APIs** and limited **GraphQL**, enabling ticket processing during off-hours through webhook-driven, event-based workflows.
- Led feature development and enhancements across **TOGa platforms** in line with user requirements, enhancing multi-vendor workflows and ensuring smooth post-release production stabilization.
- Implemented client-specific UI logic for **7+ client onboardings** in **TOGa View** using a multi-tenant architecture, enabling configurable layouts, workflows, and data visibility.

- Designed and optimized **MySQL database schemas** with proper foreign key relationships, and integrated **NetSuite order workflows** using background workers and scripts to improve data consistency and synchronization reliability.
- Built and enhanced **React + TypeScript UI components**, applying **lazy loading, component reusability, and conditional rendering** to improve performance, reduce initial load time, and support scalable frontend development.
- Improved **frontend** performance and maintainability by closely following **Figma designs**, optimizing component structure, managing state effectively, and ensuring smooth integration between **React UI** and **backend APIs**.
- Designed and implemented **automated client reports** using background workers and **cron schedules**, generating scheduled email reports for **multiple clients** to track service progress, operational metrics, and ongoing activities.
- Actively supported production systems through **log analysis, backend fixes, database debugging, and API validation using Postman**, while managing tasks, bugs, and sprint work using **ClickUp** and collaborating through **GitHub**, **reducing incident resolution time by 35%**.
- Deployed and supported applications on **AWS**, working with **EC2, S3, and RDS**, and maintaining **CI/CD pipelines** using **GitHub Actions** and **AWS CodePipeline** to ensure reliable and timely releases.

## DOCUBYTE SOFTWARE SOLUTIONS, INDIA | FULL STACK DEVELOPER

JUN 2020 - AUG 2022

- Contributed to the development and enhancement of **AJIO's large-scale e-commerce web application**, working on **Java and Spring Boot-based backend services and RESTful APIs** that power **product discovery, cart, checkout, and order management** features in a high-traffic production environment.
- Assisted in designing, developing, and maintaining **RESTful APIs using Spring Boot**, implementing request validation, error handling, logging, and pagination, and integrating APIs with frontend applications built using **React, JavaScript, and TypeScript**.
- Worked on **payment processing, inventory management, and user authentication flows**, collaborating with senior engineers to implement secure and reliable backend logic aligned with business and user requirements.
- Designed and optimized **PostgreSQL schemas** for transactional order data and leveraged **MongoDB** for flexible product and catalog data, performing **query tuning, indexing, and schema updates** to improve database performance and data consistency.
- Implemented **asynchronous processing and background jobs** using Spring components and schedulers to support inventory synchronization, reporting workflows, and internal data processing tasks.
- Participated in building **data validation and transformation logic** between services to ensure reliable data flow across backend systems and downstream integrations.
- Developed and enhanced **frontend components** using **React, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, and Tailwind**, contributing to customer-facing features across browsing, cart, and checkout experiences.
- Improved frontend performance and maintainability by applying **lazy loading, code splitting, reusable component patterns, and basic state management techniques**, reducing page load times and improving UI responsiveness.
- Collaborated with QA and DevOps teams on **CI/CD pipelines and deployment workflows**, using **Azure and Bitbucket**, and participated in smoke testing and release validation activities.
- Supported **production systems and incident resolution**, assisting with log analysis, bug fixes, and issue tracking using **ServiceNow**, while writing unit tests with **JUnit and Jest** to maintain application stability.

## PROJECTS

**WatchWave** - Built WatchWave, a **React-based** streaming app with **OpenAI's API** for recommendations. Integrated **Firebase, Redux**, and **TMDB API** to enhance functionality and provide a seamless user experience.

**E-Wallet Express** - Built an e-wallet app using **Java** and **Spring Boot**, split into smaller parts for different functions. Used tools like **Kafka** and **Redis** to make it fast, and added security features to keep it safe. Packaged everything in **Docker** containers for easy setup and management.

## EDUCATION

Rowan University

GPA: 3.63/4.0

Sep 2022 - May 2024

*Master of Science in Computer Science*

Courses: Advanced Design & Algorithms, Advanced Database, Network Security, Functional programming

Institute Of Aeronautical Engineering

GPA: 3.23/4.0

Aug 2018 – May 2022

*Bachelors in computer science and engineering*

Courses: Data Structures, Software Engineering, Web Technologies, Cloud Application Development, E-Commerce
